Computer Programming (CSN11101)
Lab Assignment -6

Functions, Array, Pointers

1. Write a C program that interchanges the odd and even positions elements in the array. (Hint : if the array size is odd, the last element is not swapped)
2. Write a C program to find min and max elements in an array.
3. Write a program that initializes an array with values and calculates the sum and average of the elements.
4. Write a C program to move all the even numbers to beginning and ODD numbers to the end of the same array.
5. Twenty numbers are entered through the keyboard into an array. Write a C program to find out how many of them are positive, how many are negative, how many are even and how many are odd using conditional operators.
6. Write a C program to find the first peak element of the array which is not smaller than its neighbors.
